Oracle Policy Automation Connector for Salesforce.com

KEY FEATURES

- Easily map Salesforce.com records to Oracle Policy Automation data model
- Capture and view decision reports for a full audit trail of decisions made
- Save decisions into existing Salesforce.com records or trigger record update
- Access interactive rule-driven interviews from within Salesforce.com
- Easy to use interface to setup and modify
- Compatible with Enterprise and Unlimited Salesforce.com, and OPA versions 10.x and OPA cloud

KEY BENEFITS

- Respond quickly to policy and Salesforce.com configuration change
- Maintain agility and lower risk through configuration rather than code
- Reduce APEX development and support effort
- Separate Salesforce.com configuration and integration components for improved maintenance
- Manage and maintain business logic independent of application delivery platform

Accelerate your Salesforce.com project implementations, reduce risk and simplify future upgrades with Oracle Policy Automation Connector for Salesforce.com, developed by Monad Solutions.

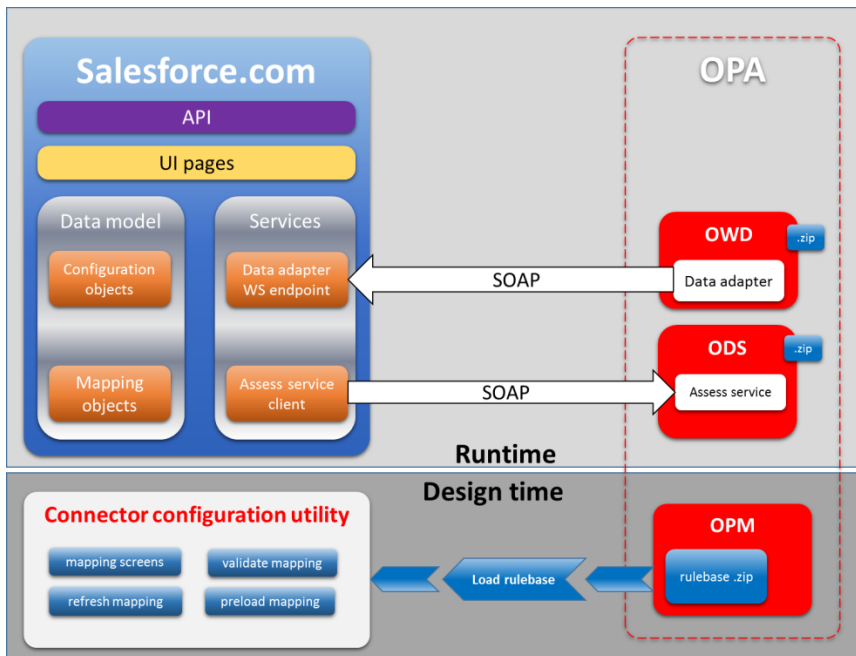

OPA: Agility and Transparency for Complex Decision Making

Oracle's innovative, high performance, enterprise policy automation platform is extremely flexible, with mobile, on premise and cloud deployment options for a wide variety of technologies and integration styles. For automating complex policies, delivering self-service guidance and high volume decision making in both batch and real-time environments, Policy Automation provides a powerful foundation for delivering business agility.

Connecting Salesforce.com and OPA

Monad's Oracle Policy Automation Connector for Salesforce.com provides integration between Oracle Policy Automation components and Salesforce.com business applications. It provides a simple method for mapping Salesforce.com data to policies modelled in Oracle Policy Automation through configuration only, making it easy to deploy high performance guidance and policy-driven calculations into a Salesforce.com landscape.

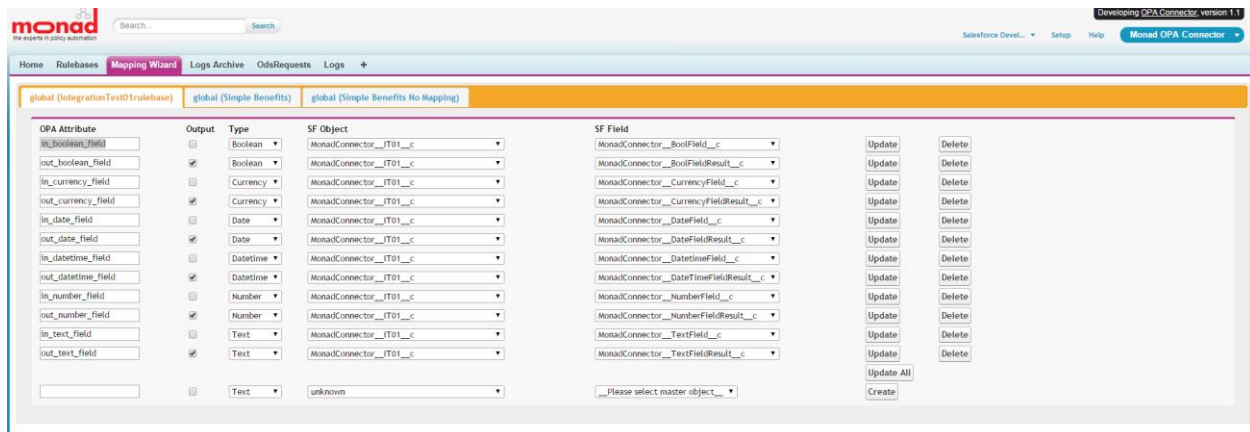

Integrate rapid, reliable decision making with flexible customer relationship management. Integrate rules captured by policy owners in Microsoft Word and Excel into Salesforce.com processes to ensure all users are making consistent, accurate and up to date decisions with a full audit trail of decisions made. The deployment and management of business logic within OPA minimizes the amount of APEX scripting development and maintenance required.

Technical overview of Oracle Policy Automation Connector for Salesforce.com

The Oracle Policy Automation Connector for Salesforce.com has been designed to exploit the power of OPA within the Salesforce.com platform, enabling access to features such as:

- Complex Data Validation
- Guided complex data capture (using OWD), also commonly known as Wizards, providing improved flexibility and a more intuitive solution
- Ability to access existing OPA business logic, e.g. HR policies within CRM

Application enables entities and attributes to be mapped between Salesforce and OPA data models
